Workshop Questions

Question One

In a typical organisation, be it your own or your client's, WHO would or should be responsible for setting the business's security policy, standards and operating protocol. Is there an optimal model or will it differ depending on the type of company? Is their any correlation between involvement/responsibility and the increased likelihood of security breaches/incidents? What process should be in place to ensure these policies remain resilient?

THRIVE

Workshop Questions

Question Two

What are the key challenges for CISO's/Risk Officers in a modern day organisation, when it comes to cyber resilience? Think people, processes, regulation etc.
